

eCognition Developer and Server: Production Focused Training

Overview

When your project is at a point where you need to create results in a production mode, the modules of this training will help you to get your data and processing up and running and under control.

Prerequisite for these modules is to have one or more eCognition Server software license.

Our eCognition Training team is happy to assist you with choosing the modules or to talk about customized training. Please contact us at eCognition_Training@trimble.com

Possible Modules

| Days | Module title |
|------|---|
| 0.25 | Introduction to Workspace automation |
| 0.5 | Carry on important information: Workspace Automation using statistics |
| 0.25 | Performance Improvement Example: Combine Maps and Regions |
| 0.25 | Tips and Tricks for efficient Rule Sets calibration |
| 0.25 | Tips and Tricks to make Rule Sets reusable |
| 1 | Create a QA interface |
| 0.25 | Tips and Tricks to monitor mistakes/accuracy |

Format/Price:

Instructor-led in-company training (up to 10 Participants); Price upon request (eCognition_Training@trimble.com)

Prerequisites and recommendations

Prerequisites: Remote Sensing and GIS knowledge; “eCognition Developer Tools and Functionalities” course; “Workflows and General Analysis Strategy” courses; work experience with eCognition Developer.

Recommendation: After the course combine from one of the other modules of this section a second course or talk with us about customized training or consulting to support you in your project work. Additionally also see our “Domain Focused Training” courses.
